

## Introducing: New Integrated easyJet Content

Galileo's Low Cost Carrier (LCC) Participation level provides subscribers with a time and therefore cost efficient method of booking content that to date has generally not been available through the GDS. And now, for the first time, Galileo is able to offer the integration of **easyJet** content into core Galileo GDS facilitating the automated handoff of LCC data to the agency mid-office/back-office systems. Galileo will provide real-time availability and pricing data, giving agents the ability to search and

book easyJet flights alongside more than 450 airlines, 28,000 car rental locations and 74,000 hotels already participant in Galileo.

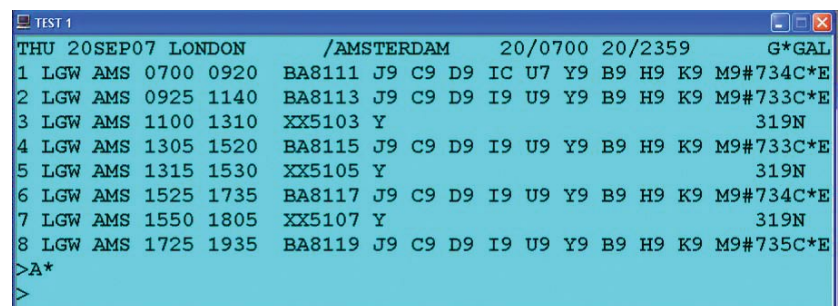

This ground-breaking move not only demonstrates easyJet's recognition of the importance Galileo plays in reaching the corporate market through Galileo connected TMC's and travel agents but also supports Galileo's strategic initiative to embrace new ways of doing business whilst leading the way in reshaping the travel industry.

### Why book easyJet using Galileo?

Low Cost Carrier, and in particular easyJet, growth continues to outstrip that of traditional airlines with LCC seats now accounting for over 25% of the European aviation market. As a consequence customers of Galileo connected TMC's and travel agencies have demanded access to LCC content via the Galileo GDS enabling LCC content to be booked in a more efficient manner than screen scraping products and/or by directly visiting LCC web sites.

highly efficient way, enabling TMCs to fully serve their customers with all the options, for example, baggage options and speedy boarding with which a business traveller expects when making or changing a booking.

Galileo's new LCC Participation level enables Galileo connected TMC and travel agents to access easyJet in a

*In the Availability and Sell screens, LCC schedules are displayed alongside traditional GDS segments*

## New easyJet content Integration at a glance

- Surveys reveal that an easyJet booking made through the Galileo solution takes half the time it takes to carry out the same transaction via screen-scraping solutions and a fourth of the time it takes them through the airline's website.
- Agents will now be able to return easyJet/other LCC options along with traditional airlines and other GDS segments in the normal Galileo booking process that they are familiar with
- The easyJet / LCC booking data can be automatically handed-off to an agencies mid/back office system for accounting purposes (via Galileo's MIR)
- Agents can be confident that the availability and fares displayed are reliable and accurate as the inventory and booking confirmation are obtained directly from the LCC's reservation system in real time via the carriers API
- Agents are able to provide their customers with a single itinerary which includes all aspects of their Galileo GDS booking automatically rather than having to manually create records in the GDS or other systems.

## Technical Requirements

- Galileo Focalpoint v3.5 or higher
- Galileo Desktop v1.01 or higher
